

Oliver Warden, Toby Hiscott, Corinne Scott

### BACKGROUND

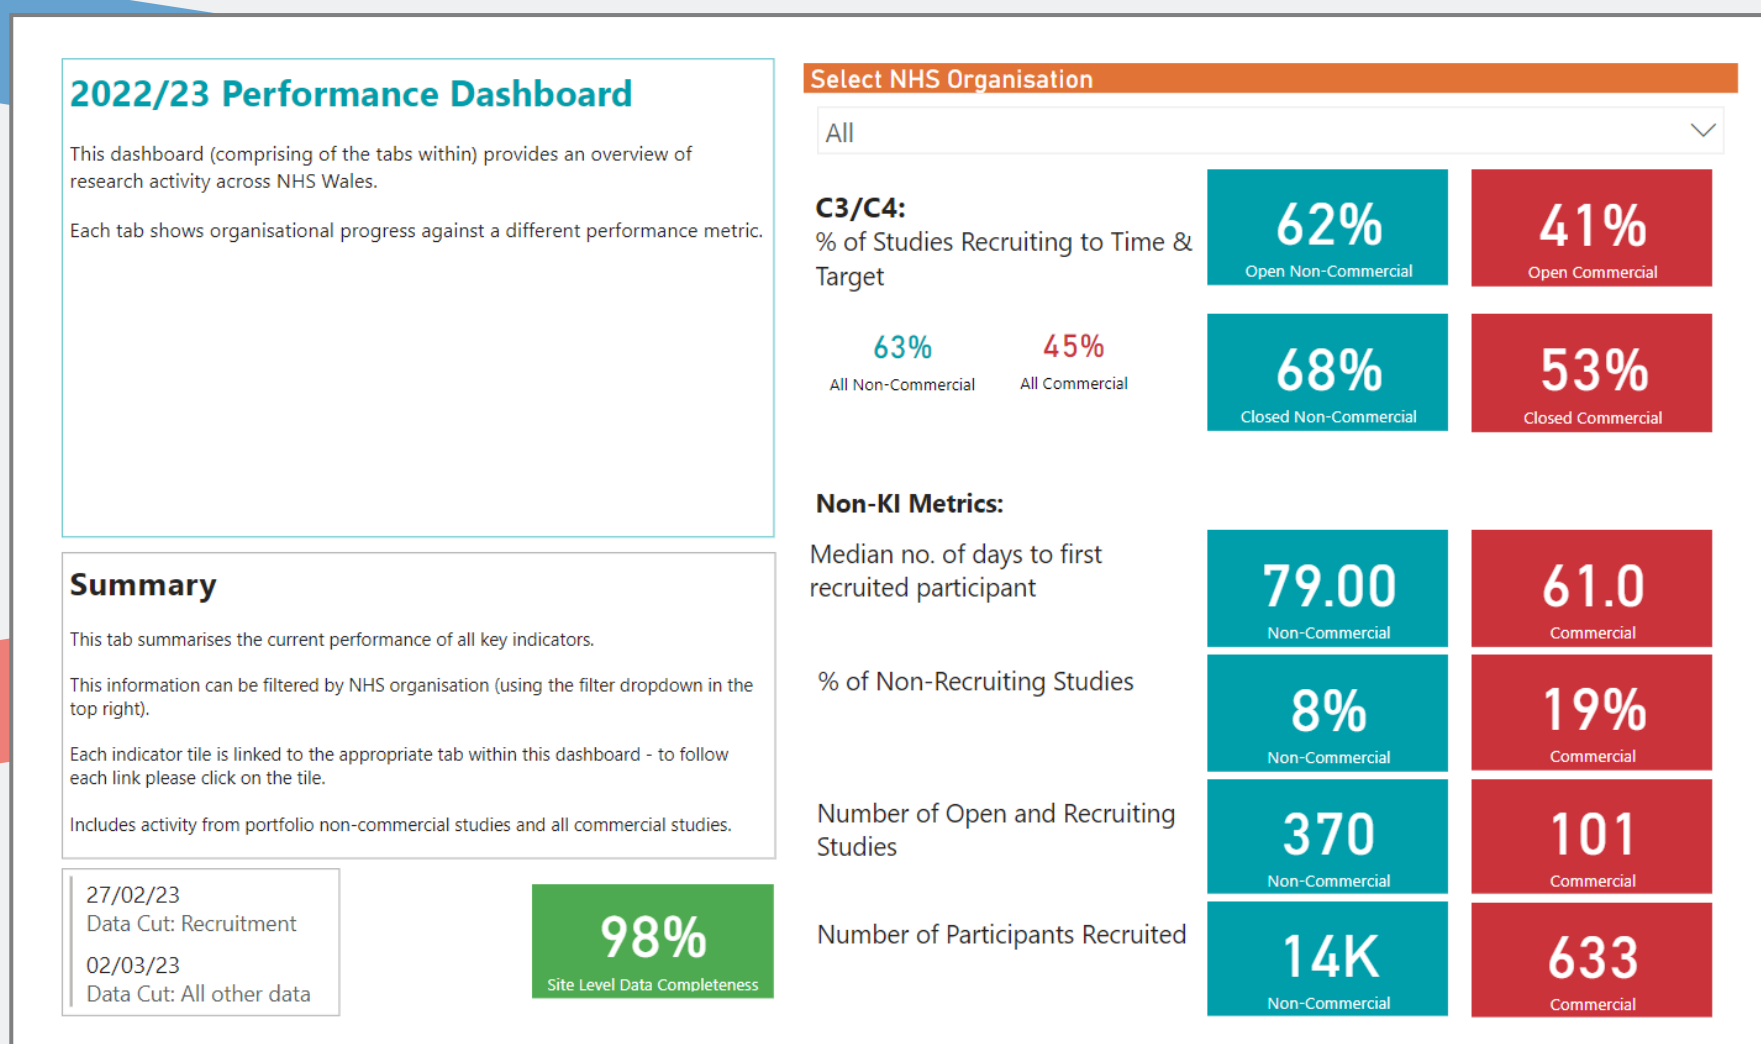

The Performance team supports research delivery processes via the provision of Business Intelligence, reporting on a range of research activity information that aims to assist Support and Delivery in Wales. Historically, this information was more basic and provided via a quarterly spreadsheet report that outlined active studies in Wales and their performance, but since 2019/20 we have replaced these with live updated dashboards which have many advantages.

### TIMELINESS

Local and central data sets are updated on a daily basis, with recruitment updated weekly, allowing delivery teams to manage studies more effectively and to identify problems more quickly.

Red & Amber Studies with less than 6 months left to go

### CALCULATED

National Key Performance Indicators (and other metrics) such as recruitment to target are calculated automatically, providing an up-to-date reflection of study performance, allowing stakeholders to intervene more quickly when needed.

### TARGETED

Dashboards can be tailored specifically for individual disease areas or teams, designed to give them a more useful view of their data and allowing for additional interrogation and insights.

### INTERACTIVE

Reports are easy to navigate and by presenting the data visually, it is more accessible for users. Most visuals can be manipulated and filtered by the user, allowing them to view exactly the data they need.

### DATA QUALITY FOCUS

Data quality is paramount when reporting information and we produce live reports that allow teams to monitor missing data and rectify any data queries that may exist.
