Local and central data sets are updated on a daily basis, with recruitment updated weekly, allowing delivery teams to manage studies more effectively and to identify problems more quickly.

TIMELINESS

Local and central data sets are updated on a daily basis, with recruitment updated weekly, allowing delivery teams to manage studies more effectively and to identify problems more quickly.

CALCULATED

National Key Performance Indicators (and other metrics) such as recruitment to target are calculated automatically, providing an up-to-date reflection of study performance, allowing stakeholders to intervene more quickly when needed.

TARGETED

Dashboards can be tailored specifically for individual disease areas or teams, designed to give them a more useful view of their data and allowing for additional interrogation and insights.

INTERACTIVE

Reports are easy to navigate and by presenting the data visually, it is more accessible for users. Most visuals can be manipulated and filtered by the user, allowing them to view exactly the data they need.

DATA QUALITY FOCUS

Data quality is paramount when reporting information and we produce live reports that allow teams to monitor missing data and rectify any data queries that may exist.
